

## POULTRY FARMER PATRICK DAY ABOUT THE MULTIHEAT HOT WATER UNIT:

# IT PRODUCED ABOUT 10°C MORE HEAT

A couple of years ago Patrick Day from Chelmsford installed three 200kW biomass heat exchanging units on one of his farms. He experienced poor results and in search for a solution we offered Patrick a trial with our Hot Water Units:

*“We did one trial to compare the old heaters with the MultiHeat Hot Water Unit and surprisingly the latter produced about 10°C more heat in the sheds.”*

Other advantages Patrick experienced:

*“They reduce gas consumption to almost zero, very good spread of temperature, reduced CO<sub>2</sub>, dryer litter from the birds, easy to maintain and clean and no clogging underneath the heat exchanger. Just a good machine, I wish I bought them the first time.”*

Check the full video with Patrick on our website.
